

Performance Management Change Position Paper

01/03/2011

This position paper states the current position of Performance Management at Rossendale Borough Council and how it may be affected and developed in line with new Coalition Government Policies.

Introduction & Background

Performance Management is important to anyone working to improve services for local communities. It is used by both officers and councillors to measure services, drive continuous improvement and increase efficiency. Performance management is also used to ensure policy decisions are being implemented and that customers are receiving the standard of service they expect at a cost that represents good value for money. More specifically, performance management is about effective management, ensuring priorities and targets are met for the benefit of the community. Provision and publishing of performance management data is also important to enable the community to scrutinize and challenge the Council's performance.

Performance Management in the Public Sector is currently undergoing some changes as a result of the new coalition government. These changes will see significant modifications in the way performance is managed on a local level at Rossendale Borough Council (RBC). The most significant changes affecting RBC in 2011 will be the abolition of National Indicators and the disbanding of the Audit Commission and subsequent inspections. This Position Paper aims to provide some background to these changes as well as suggest which National Indicators should be kept on as Local Performance Indicators and make recommendations on future performance management informed by the outcome of a review.

The Coalition Government & the Shift in Publishing Performance Data

What is the Coalition Government's Vision

The Coalition Government has called for more local control, making Councils accountable to local residents with transparency of data and decision making processes. Improved performance based on meeting or exceeding the expectations of residents is most likely to be achieved if Councils utilise performance data effectively and engage local residents directly with performance and the decision making process.

How Will Performance Management Look Going Forward?

Information, which is meaningful to ordinary people, should be shared with local residents and released in real time where possible. The information should be shared in a way that encourages dialogue and debate between the Council and local residents.

The emphasis of performance reporting will be shifted towards providing local residents with timely and relevant information. The aim is to encourage more local democratic participation and political accountability eventually leading to local residents being involved in the decision making process.

Responsible Section/Team	Policy & Performance	Version/Status	1.1 Draft
Responsible Author	Project & Performance Improvement Officer	Date Agreed /Finalised	TBC

An engaged community will lead to better performance and improvement driven from the bottom up. Councils should therefore look to create more debate through online and other initiatives.

What Does the Council Need to do to Achieve This?

The Council should more actively inform residents about its performance, make performance data more accessible, and establish a dialogue about the key strategic priorities.

KPMG’s best practice ‘vision for local government’ recommends this is achieved by:-

- 1) Providing accessible, real-time access to data** – Councils should make use of existing information outlets to get the public looking at data, and responding to what the data shows them. This should be released as regularly as possible so that people do not feel ‘behind the curve’. Data should be formatted and presented in a way which will engage residents and make them keen to find out more.
- 2) Making it easy for residents to respond** – Councils could begin to explore ways to capture constructive thoughts from more residents who have an opinion about how best to govern the local area, and establish a strategy for incorporating responses into the political decision making process.
- 3) Taking control of performance data** – Councils should push for more control of their performance data, making it more meaningful to the local area.

The Coalition Government’s new approach aims to put assessment and improvement in the hands of Councils, both individually as well as collectively. Assessing the ‘Freedom to Lead’ campaign and the ‘Sector self-regulation and improvement’ consultation document the following principles are the basis for how performance shall be managed going forward:-

- Councils are responsible for their own performance and for leading the delivery of improved outcomes for local people in their area.
- Councils are accountable to their communities. Stronger accountability through greater transparency helps local people drive further improvement.
- Councils have collective responsibility for the performance of the sector and to collaborate through sharing best practice and actively encouraging peer support and benchmarking.
- Further reductions in the burden of inspection and data reporting can be made – enabling cost savings for councils and Government.
- Working with partners locally and encouraging streamlined funding arrangements nationally so that tools and services are available that support local agencies to improve places and services are available that support local agencies to improve places and service quality in a more joined up way.

How these principles may affect RBC’s Performance Management Framework can be seen on Figure 1, how these principles affect RBC’s Corporate Priorities can be seen in Figure 2 and how these principles may affect the structure of the Rossendale Forum can be seen in Figure 3.

Performance Management

The Single Data Set

The Coalition Government has announced the abolition of National Indicators and has produced a single dataset to replace it. The single data set should not be used in the Performance Management Framework as the list of requirements are not Indicators and will not be used to assess Local Government Authorities (either for money or performance etc). The list will be used to inform public sector on what should be managed in conjunction with each Council's priorities (and as such this will make benchmarking difficult with differing priorities).

In terms of which NI's Council's retain, this will be decided on a value for money basis. For example, the emphasis has changed onto what the public perceive our street cleanliness is like rather than having statistics telling them what the streets are like (public opinion is the most important).

Following consultation with managers and Covalent data collection officers, both in Rossendale and across Lancashire, a recommended revised list of performance indicators going forward can be seen in Figure 4, which shows which indicators are proposed to be removed and any new local indicators being developed.

Lancashire Benchmarking

A spreadsheet has been drafted by the Lancashire Benchmarking Task & Finish Group which LA's will be able to update for data comparison, all LA's have been asked which PI's we would like to benchmark using this method going forward (either NI's or possible LI's such as sickness absence). This document is currently out for consultation.

The National Data Hub

The Coalition Government has closed down the National Data Hub and a new one is being developed by the LGA called 'LG Inform'.

Covalent

What is it?

Covalent is Rossendale Borough Council's Performance Management Software. This system is used to collect, monitor and report on the Council's PI's, Actions and Risks as well as for monitoring Projects and Inspections.

What does it cost?

Covalent costs the Council £5,367.71+rpi for Annual Support. The Annual support payment is made up of technical support for users, updates to PI's/Benchmarking, costs associated with offsite hosting and ongoing releases and bug fixes etc.

The rpi figure is in line with inflation but after discussions with Covalent they have agreed to waive this Inflation figure for 2011/12 as part of the Council's cost saving initiatives. The inflation figure varies each month but based on 5% this would equate to around a £270 saving.

As part of the review consultation was carried out with colleagues and the number of Covalent users will be reduced from 90 to 53, the results of this consultation can be seen in the Consultation paper.

What are the positives of using Covalent?

As a Performance Management System Covalent is one of the best on the market and it can be adapted to the Council's needs. Covalent is user friendly and it is already imbedded across the Council, staff members and managers are aware of the system and how it works. Covalent has the best reporting function than other alternatives and the system is highly regarded in the public sector. Covalent also requires minimal maintenance; it is maintained by government changes automatically, which is included in the fee. The Coalition Government are still reviewing the position and it seems prudent to retain Covalent to ascertain if further changes are made and renew the position in 12 months.

What are the negatives of using Covalent?

Covalent costs the Council £5,367.71+rpi per annum for Annual Support.

Are there any alternatives?

Whilst the Covalent system is an excellent performance management tool, alternatives to consider if the Council decides to remove the system to save money going forward are:-

1. Using Sharepoint.

2. Using Microsoft Software packages (Word & Excel)

Training will be required across the Council should a new Performance Management system be implemented.

What are the negatives of using one of the alternatives?

There is no timescale identified for the full implementation of Sharepoint. Once Sharepoint is eventually rolled out across the Council, the workforce will need to be retrained by ICT and new systems implemented. ICT would need to provide full support to officers using the system requiring officer time previously not needed including the transfer of data from Covalent. The reporting functionality is currently uncertain.

Using Microsoft Software packages will require a new data quality strategy to ensure consistency and accuracy of data entry. Using Microsoft software will require more officer time to compile and analyse results as well as for producing any required reports.

Performance Reports

Going forward performance reporting should be reviewed.

1. As a more in depth financial report already goes to Overview and Scrutiny it is recommended that the current finance section of the Integrated Performance Report is reviewed by Overview and Scrutiny. Is the current way it is reported in the Integrated Performance Report sufficient for O&S or is there any changes recommended?
2. Also for review is whether or not it would be beneficial to include in the Quarterly Integrated Report some key indicators and figures from CLAW, Leisure or other performance reports? This would eliminate the need for a full report from these areas going to Overview & Scrutiny. Is the current way it is reported in the Integrated Performance Report sufficient for O&S or is there any changes recommended?
